- Changing the color of fur
- Making venom
- Instincts

6. What is not one of the forms of adaptation?

- Mimicry
- Co-adaptation
- Death

7. What happens during the process of natural selection?

- Only useful and strong species survive forming the strong genetic base for the descendants
- Strong species live better than weak species
- Strong species mate with weak species to produce descendants

8. What is not a phenotypic trait?

- Eye color
- Height
- Family name

Adaptation Quiz: Trivia Questions and Answers

Right answers

1. What is an adaptation?

A biological process that fits organisms to their environment

2. Who explained adaptation through natural selection?

Charles Darwin

3. What happens to the hare's fur in winter?

It turns white

4. How many types of adaptation traits exist?

3

5. What is the example of physiological adaptation?

Making venom

6. What is not one of the forms of adaptation?

Death

7. What happens during the process of natural selection?

Only useful and strong species survive forming the strong genetic base for the descendants

8. What is not a phenotypic trait?

Family name
