

Anatomy Quiz: questions and answers

1. What does anatomy deal with?

- Microorganisms
- Human Beings
- Structure of Organisms

2. In insects, the exoskeleton is thickened by:

- Cross linking of proteins
- Mineralization
- Dead Cells covering it

3. What is the largest organ in most of the species?

- Skin
- Heart
- Pancreas

4. What is a human nose primarily made of?

- Cartilage
- Bone
- Tendon

5. How many bones does the human body has st birth?

- 300
- 270

200

6. Anatomy is divided into which two main classifications?

- Microscopic and Multiscopic
- Macroscopic and Multiscopic
- Macroscopic and Microscopic

7. Which plane divides the body into inferior and superior positions?

- Coronal
- Sagittal
- Transverse

8. Who is considered to be the father of microscopical anatomy?

- Saunders William
- Marcello Malpighi
- Herophilus

9. The longest bone in the human body is known as:

- Sternum
- Tibia
- Femur

10. How many orbital cavities are there in a human body?

- 3
- 2
- 1

Anatomy Quiz: questions and answers

Right answers

1. What does anatomy deal with?
Structure of Organisms
2. In insects, the exoskeleton is thickened by:
Cross linking of proteins
3. What is the largest organ in most of the species?
Skin
4. What is a human nose primarily made of?
Cartilage
5. How many bones does the human body has st birth?
270
6. Anatomy is divided into which two main classifications?
Macroscopic and Microscopic
7. Which plane divides the body into inferior and superior positions?
Transverse
8. Who is considered to be the father of microscopical anatomy?
Marcello Malpighi
9. The longest bone in the human body is known as:
Femur
10. How many orbital cavities are there in a human body?
2
