

Microbiology Bacteria Quiz: questions and answers

1. Where do bacteria live?

- Water
- Soil
- Both are true

2. How many bacterial cells are there in a gram of soil?

- About 3 million
- About 40 million
- About 400 thousand

3. Which part of the body has the largest number of bacteria?

- Gut flora
- Skin
- Mouth

4. What is a pathogenic bacterium?

- A bacteria that protect your body
- A bacteria that helps your digestion
- A bacteria that can cause disease

5. What are the most common fatal bacterial diseases?

- Respiratory infections
- Urinary tract infections

Sexual transmission infections

6. Why are bacteria important in the industry?

- To the production of cheese and yogurt through fermentation
- To the recovery of gold
- To sewage treatment

7. What are the spherical bacterial species called?

- Spirilla
- Neisseria
- Cocci

8. What are the major criteria in which the bacterial metabolism is classified?

- The source of energy
- The electron donors used
- Both are correct

9. What is it called when a bacterium get their carbon from another organic carbon?

- Autotrophic
- Methanotrophic
- Heterotrophy

10. How can bacterial infections be treated?

- Microbicidal
- Antiseptics
- Antibiotics

Microbiology Bacteria Quiz: questions and answers

Right answers

1. Where do bacteria live?
Both are true
2. How many bacterial cells are there in a gram of soil?
About 40 million
3. Which part of the body has the largest number of bacteria?
Gut flora
4. What is a pathogenic bacterium?
A bacteria that can cause disease
5. What are the most common fatal bacterial diseases?
Respiratory infections
6. Why are bacteria important in the industry?
To sewage treatment
7. What are the spherical bacterial species called?
Cocci
8. What are the major criteria in which the bacterial metabolism is classified?
Both are correct
9. What is it called when a bacterium get their carbon from another organic carbon?
Heterotrophy
10. How can bacterial infections be treated?
Antibiotics
